Project Guide

ABSTRACT

This project is a web-based shopping system for an existing shop. The project objective is to deliver the online shopping application into web platform.

This project is an attempt to provide the advantages of online shopping to customers of a real shop. It helps buying the products in the shop anywhere through internet by using a website device. Thus, the customer will get the service of online shopping and home delivery from his favorite shop. This system can be implemented to any shop in the locality or to multinational branded shops having retail outlet chains.

If shops are providing an online portal where their customers can enjoy easy shopping from anywhere, the shops won't be losing any more customers to the trending online shops such as Flipkart or e-bay. Since this application is available in the Smartphone it is easily accessible and always available.

ACKNOWLEDGEMENT

I take this occasion to thank God, almighty for blessing us with his grace and taking our endeavor to a successful culmination. I extend my sincere and heartfelt thanks to our esteemed guide, **Mr. Milind Arjun** for providing me with the right guidance and advice at the crucial juncture and for showing me the right way. I extend my sincere thanks to our respected **Centre Co-Ordinator Mr. Prashant Karhale**, for allowing us to use the facilities available. I would like to thank the other faculty members also, at this occasion. Last but not the least, I would like to thank my friends and family for the support and encouragement they have given me during the course of our work.

INTRODUCTION

This project is a web-based shopping system for an existing shop. An Online Shopping Management System where the Admin can Add, Update and Delete products. The Products are divided into various categories like Books, Mobiles, Fashion, etc. A user can select a particular item to view the details, choose the number of items and fill in details like Name, Address, etc. to buy a product the project objective is to deliver the online shopping application into web platform. Online shopping is the process whereby consumers directly buy goods or services from a seller in real-time, without an intermediary service, over the Internet. It is a form of electronic commerce. This project attempts to provide the advantages of online shopping to customers of a real shop. It helps buying the products in the shop anywhere through internet by using an android device. Thus, the customer will get the service of online shopping and home delivery from his favorite shop.

The objective of the project is to make an application in android platform to purchase items in an existing shop. In order to build such an application complete web support, need to be provided. A complete and efficient web application which can provide the online shopping experience is the basic objective of the project. The web application can be implemented in the form of an android application with web view.

Features:-

1. Products Available-Atomic Habits, OPPO A74 5G, Symphony Air Cooler
2. Search for groceries (Rice, Besan) products easily
3. Category of products-Books, Mobiles, Sports, Fashion,
4. Cart feature
5. Date and time of product delivery will be notified by the system
6. The admin can add/delete Suppliers and delivery boys.
7. Allows the customers to maintain cart.

1.1 PROJECT OBJECTIVE

The objective of the project is to make an application in android platform to purchase items in an existing shop. In order to build such an application complete web support, need to be provided. A complete and efficient web application which can provide the online shopping experience is the basic objective of the project. The web application can be implemented in the form of an android application with web view.

1.2 PROJECT OVERVIEW

The central concept of the application is to allow the customer to shop virtually using the internet and allow customers to buy the items and articles of their desire from the store. The information pertaining to the products are stores on an RDBMS at the server side (store).

The server processes the customers, and the items are shipped to the address submitted by them. The application was designed into two modules first is for the customers who wish to buy the articles. Second is for the storekeepers who maintains and updates the information pertaining to the articles and those of this product is a departmental store where the application is hosted on the web and the administrator maintains the database. The application, which is deployed the customer database, the details of the items are brought forward from the database for the customer view based on the selection through the menu and the database of all the products are updated at the end of each transaction. Data entry into the application can be done through various screens designed for various levels of users. Once the authorized personal feed the relevant data into the system, several reports could be generated as per the security.

1.3 PROJECT SCOPE

This system can be implemented to any shop in the locality or to multinational branded shops having retail outlet chains. The system recommends a facility to accept the orders 24X7 and a home delivery system which can make customers happy. If shops are providing an online portal where their customers can enjoy easy shopping from anywhere, the shops won't be losing any more customers to the trending online shops such as FlipKart or eBay. Since the application is available and always available.

1.4 STUDY OF THE SYSTEM

1.4.1 MODULES:

The system after careful analysis has been identified to be presented with the following modules and roles.

The modules involved are:

- Administrator
- Supplier
- Users
- Delivery Boy

1.4.1.1 Administrator:

The administrator is the super user of this application. Only admin have access into this admin page. Admin may be the owner of the shop. The administrator has all the information about the users and about all products.

This module is divided into different sub modules.

1. Manage Suppliers

2. Manage Products
3. Manage Users
4. Manage Orders
5. Manage Delivery Boy

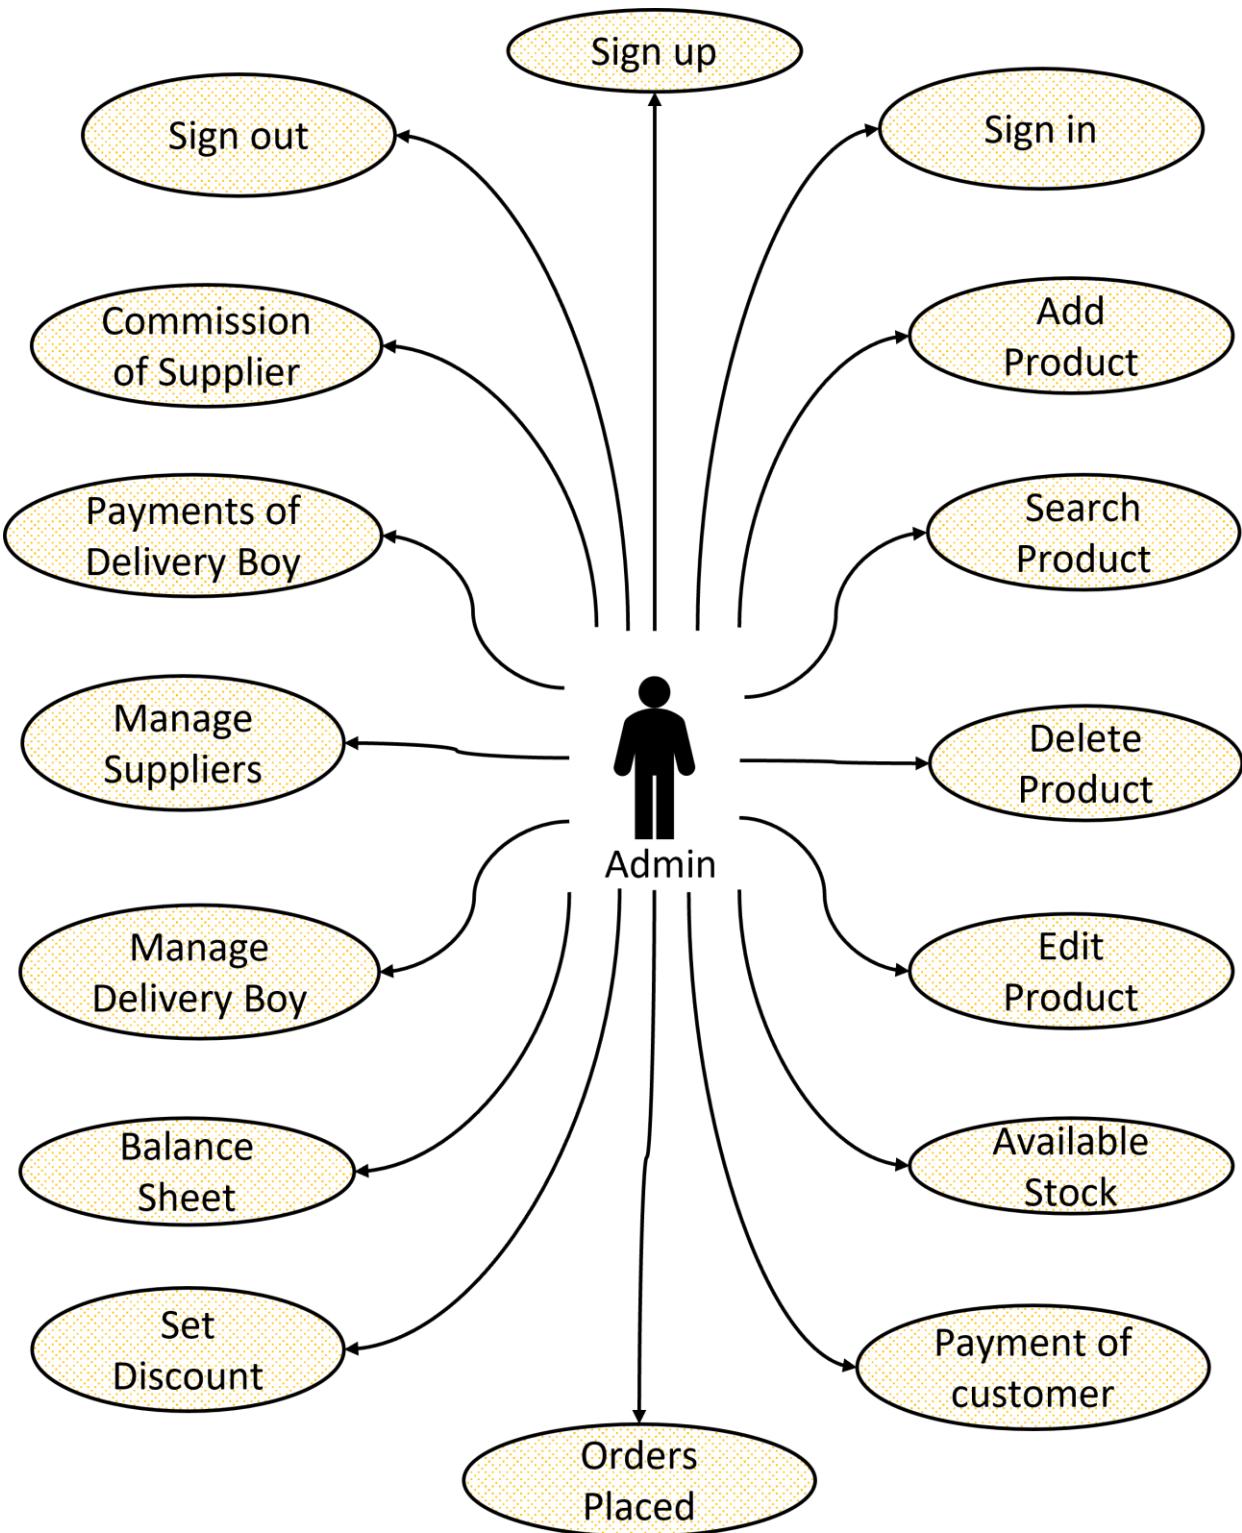

Figure 1 Admin Activity Diagram

➤ **Add Products**

The shopping cart contains different kinds of products of different category. The products can be classified into different categories by name. Admin can add new products into the existing system with all its details including an image.

➤ **Delete Products**

Administrator can delete the products based on the stock of that particular product.

➤ **Search Products**

Admin will have a list view of all the existing products. He can also search for a particular product by name.

➤ **Add Delivery Boy**

Admin can add delivery boy for the system. Admin can see the details of delivery boy and the order delivery.

➤ **Remove Delivery Boy**

Admin have the privilege to remove the delivery boy.

➤ **Add Supplier**

Admin have the privilege to add the supplier and according supplier category he can add products and he can manage the available products stocks.

➤ **Remove Supplier**

Admin have the privilege to remove the supplier.

➤ **Search Product**

Only admin is having the privilege to add a supplier. He can search the product to manage the product.

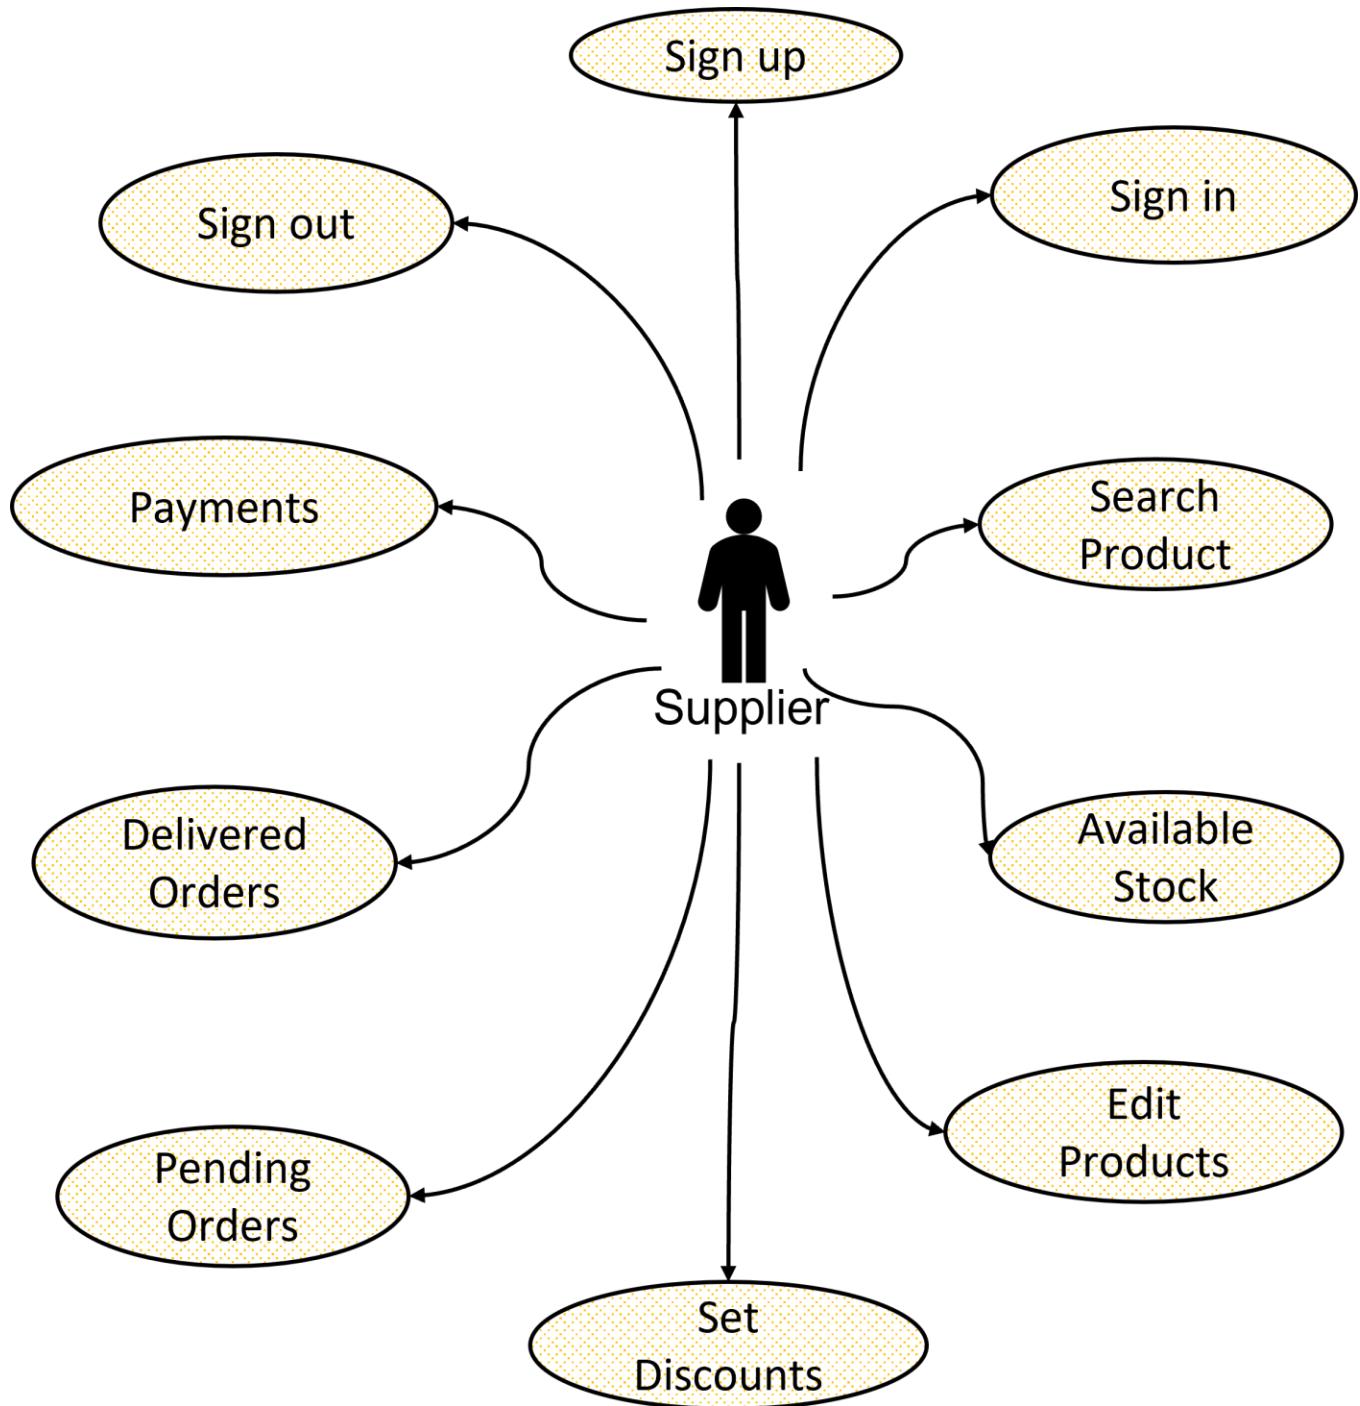

Figure 2 Supplier Activity Diagram

➤ **Edit Product**

Supplier can edit his added product.

➤ **Set Discounts**

Supplier can set discounts to the products.

➤ **Delivered Orders**

Supplier can see order details of the ordered product by the customer.

➤ **Pending Orders**

Supplier can see order details of the ordered product by the customer.

➤ **Payments**

Supplier can see payment details of the ordered product by the customer.

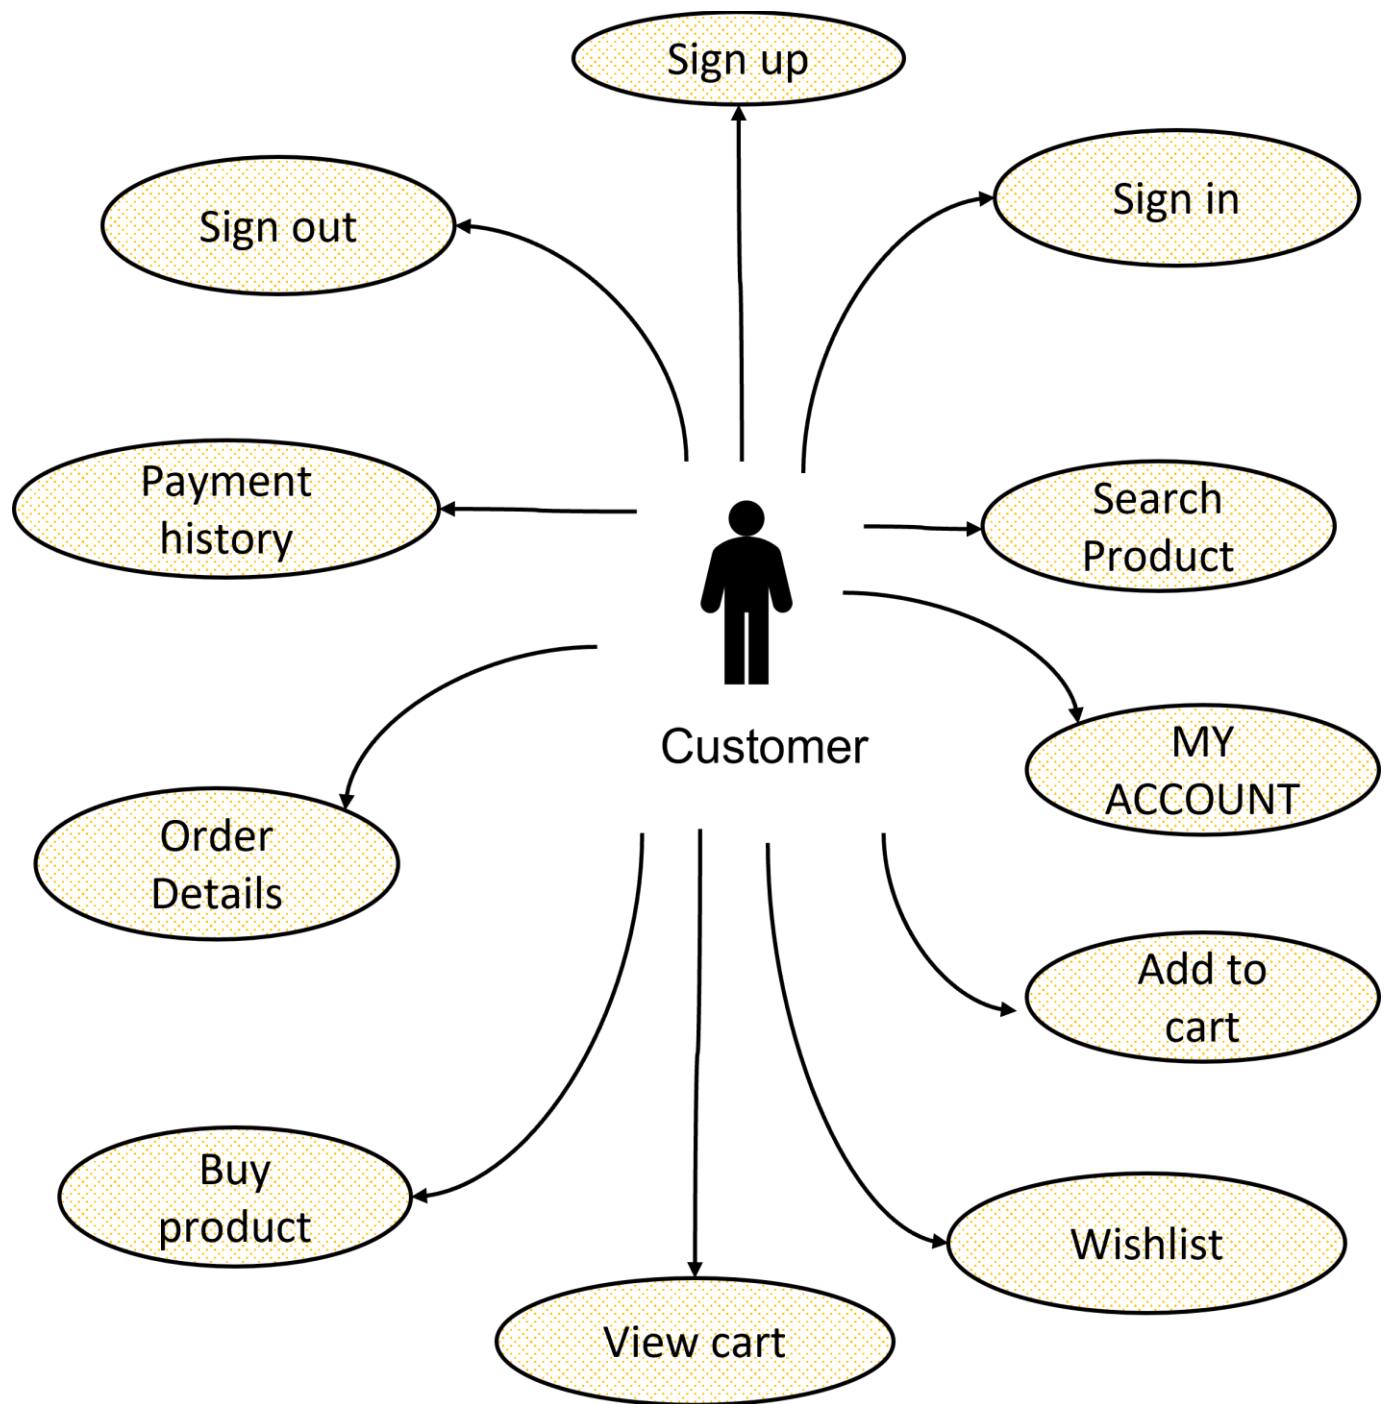

Figure 3 Customer Activity Diagram

➤ **Customer sign in, sign out, create account**

This feature is provided to customer so he can sign in, sign out and create account for new customer.

➤ **Search Product**

Customer can search the product as per his wish in specific category.

➤ **Add to Cart**

Customer can add products to cart which he wants to buy the products.

➤ **Payments**

Customer have a privilege to his order he can see his order details.

➤ **Order Details**

Customer have a privilege to his order he can see his order details.

➤ **Buy Product**

Customers can buy product from his cart by doing payment.

➤ **Wish List**

Customer can have a wish list for future buying products he can add products in the wish to list.

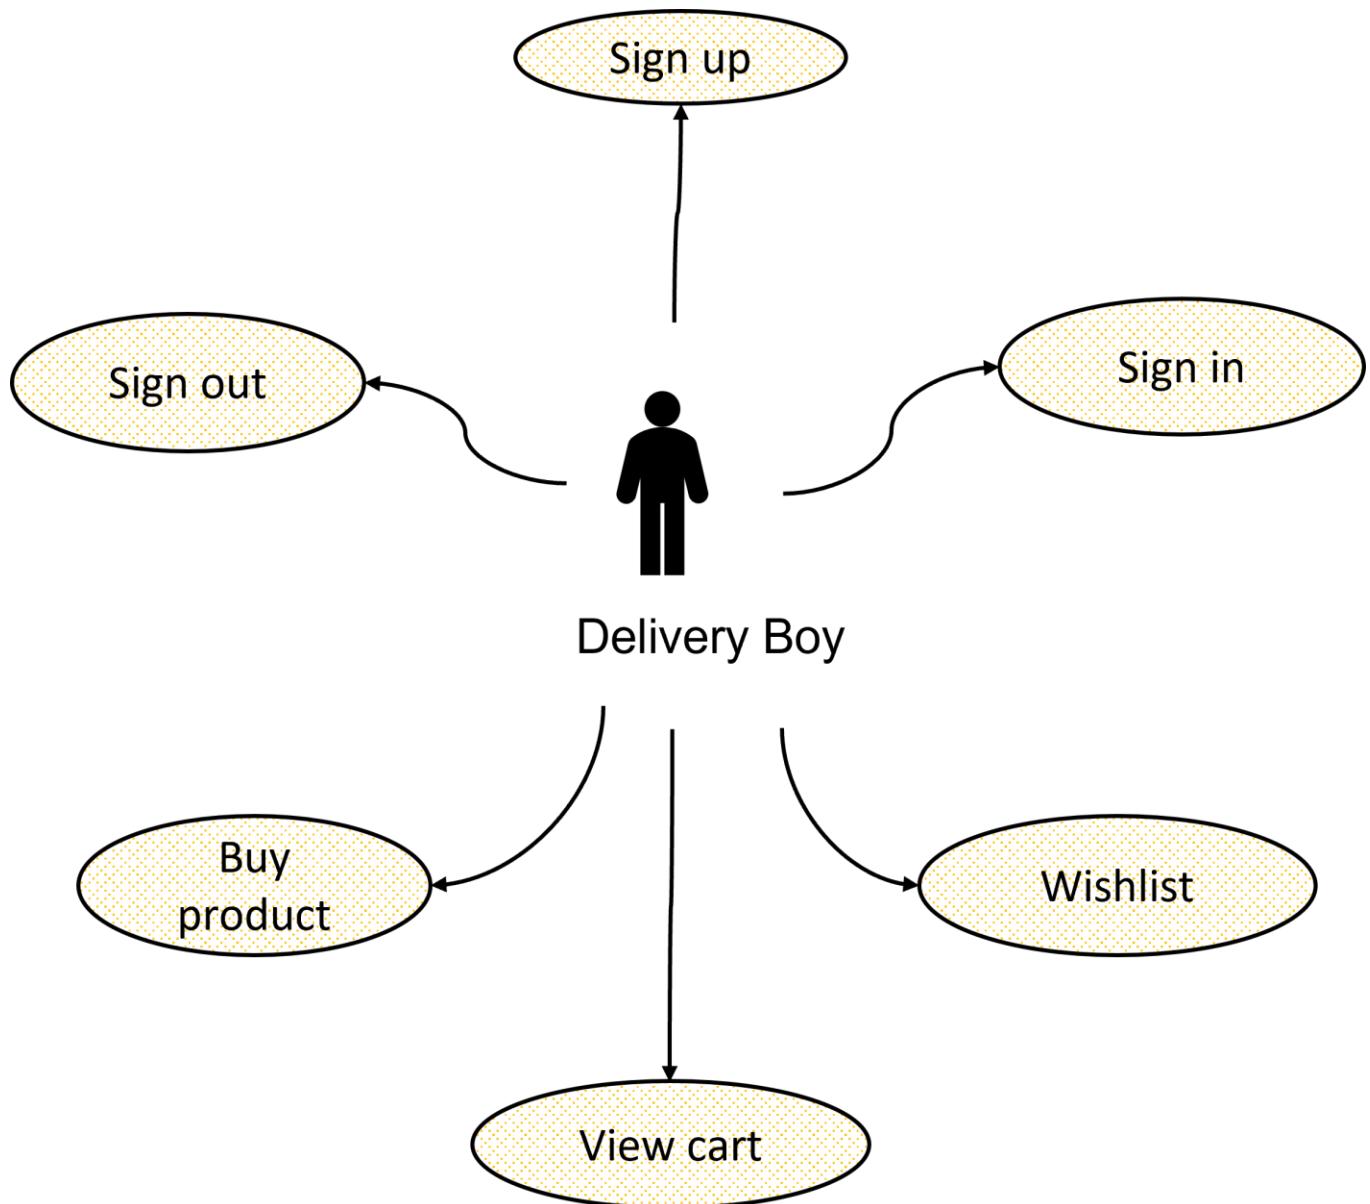

Figure 4 Delivery Boy Activity Diagram

➤ **Delivery Boy sign in, sign out**

This feature is provided to Delivery Boy so he can sign in, sign out and delivery boy is added by admin.

➤ **Pending Orders**

Delivery boy can see the pending order details after sign in account.

➤ **Delivered Orders**

Delivery boy can see the delivered order details after sign in account.

➤ **Payment History**

Delivery boy can see the payment history of his product.

SYSTEM ANALYSIS

System analysis is the process of gathering and interpreting facts, diagnosing problems, and using the information to recommend improvements on the system. System analysis is a problem-solving activity that requires intensive communication between the system users and system developers.

System analysis or study is an important phase of any system development process. The system is viewed as a whole, the inputs are identified, and the system is subjected to close study to identify the problem areas. The solutions are given as a proposal. The proposal is reviewed on user request and suitable changes are made. This loop ends as soon as the user is satisfied with the proposal.

2.1 EXISTING SYSTEM

The current system for shopping is to visit the shop manually and from the available product choose the item customer want and buying the item by payment of the price of the item.

- ✓ It is less user-friendly.
- ✓ User must go to shop and select products.
- ✓ It is difficult to identify the required product.
- ✓ Description of the product limited.
- ✓ It is a time-consuming process
- ✓ Not in reach of distant users.

2.2 PROPOSED SYSTEM

In the proposed system customer need not go to the shop for buying the products. He can order the product he wish to buy through the application in his Smartphone. The shop owner will be admin of the system. Shop owner can appoint moderators who will help owner in managing the customers and product orders. The system also recommends a home delivery system for the purchased products.

2.3 SYSTEM REQUIREMENT SPECIFICATION

2.3.1 GENERAL DESCRIPTION

Product Description:

The system consists of two parts. A web application which can provide the online shopping service for the customer to access the web service from his Smartphone/System. Web application should be able to help the customer for selecting his item and to help the owner in managing the orders from the customers.

Problem Statement:

As online shopping became a trend nowadays the regular shops are losing their customers to online brands. Customers have effortless shopping experience and saving time through shopping online. For competing with those online brands, if shops are providing an online portal where their customers can shop through internet and get the products at their doors it will increase the number of customers.

2.3.2 SYSTEM OBJECTIVES

- To provide a Web application for online shopping of products in an existing shop.
- To provide an online shopping web site for the same shop.

2.3.3 SYSTEM REQUIREMENTS

2.3.3.1 NON-FUNCTIONAL REQUIREMENTS

i. EFFICIENCY REQUIREMENT

When an online shopping cart android application implemented customer can purchase product in an efficient manner.

ii. RELIABILITY REQUIREMENT

The system should provide a reliable environment to both customers and owner. All orders should be reaching at the admin without any errors.

iii. USABILITY REQUIREMENT

The Web application is designed for user friendly environment and ease of use.

iv. IMPLEMENTATION REQUIREMENT

Implementation of the system using React in front end with Spring Boot as back end and it will be used for database connectivity. And the database part is developed by MySQL. Responsive web designing is used for making the website compatible for any type of screen.

v. DELIVERY REQUIREMENT

The whole system is expected to be delivered in four months of time with a weekly Evaluation by the project guide.

2.3.3.2 FUNCTIONAL REQUIREMENTS

USER

➤ USER LOGIN

Description of feature

This feature used by the user to login into system. A user must login with his username and password to the system after registration. If they are invalid, the user not allowed to enter the system.

Functional Requirement

- Username and password will be provided after user registration is confirmed.
- Password should be hidden from others while typing it in the field

➤ REGISTER NEW

USER Description of feature

A new user will have to register in the system by providing essential details in order to view the products in the system. The admin must accept new user by unblocking him.

Functional Requirement

- System must be able to verify and validate information.

- The system must encrypt the password of the customer to provide security.

➤ PURCHASING AN ITEM

Description of feature

The user can add the desired product into his cart by clicking add to cart option on the product. He can view his cart by clicking on the cart button. All products added by cart can be viewed in the cart. User can remove an item from the cart by clicking remove. After confirming the items in the cart, the user can submit the cart by providing a delivery address. On successful submitting the cart will become empty.

Functional Requirement

- System must ensure that, only a registered customer can purchase items.
- Admin account should be secured so that only owner of the shop can access that account

MODERATOR

Description of features

A moderator is considered as a staff who can manage orders for the time being. As a future update moderator may give facility to add and manage his own products. Moderators can reduce the workload of admin. Now moderator has all the privilege of an admin having except managing other moderators. He can manage users and manage products. He can also check the orders and edit his profile.

Functional Requirement

- The system must identify the login of a moderator.

ADMIN

➤ MANAGE USER

Description of features

The administrator can add user, delete user, view user and block user.

➤ MANAGE MODERATOR

Description of features

The administrator can add moderator, delete moderator, block moderator and search for a moderator.

➤ MANAGE PRODUCTS

Description of features

The administrator can add product, delete product, and view product.

➤ **MANAGE ORDER**

Description of features

The administrator can view orders and delete orders.

Functional Requirements:

- The system must identify the login of the admin.
- Admin account should be secured so that only owner of the shop can access that account.

MODERATOR

Description of features

A moderator is considered as a staff who can manage orders for the time being. As a future update moderator may give facility to add and manage his own products. Moderators can reduce the workload of admin. Now moderator has all the privilege of an admin having except managing other moderators. He can manage users and manage products. He can also check the orders and edit his profile.

Functional Requirement

- The system must identify the login of a moderator.

SYSTEM DESIGN

System design is the solution for the creation of a new system. This phase focuses on the detailed implementation of the feasible system. Its emphasis on translating design. Specifications to performance specification. System design has two phases of development.

- Logical Design
- Physical Design

During logical design phase the analyst describes inputs (sources), outputs(destinations), databases (data stores) and procedures (data flows) all in a format that meets the user requirements. The analyst also specifies the needs of the user at a level that virtually determines the information flow in and out of the system and the data resources. Here the logical design is done through data flow diagrams and database design. The physical design is followed by physical design or coding. Physical design produces the working system by defining the design specifications, which specify exactly what the candidate system must do. The programmers write the necessary programs that accept input from the user, perform necessary processing on accepted data and produce the required report on a hard copy or display it on the screen.

3.1 INPUT AND OUTPUT DESIGN

3.1.1 INPUT DESIGN:

Input design is the link that ties the information system into the world of its users. The input design involves determining the inputs, validating the data, minimizing the data entry and provides a multi-user facility. Inaccurate inputs are the most common cause of errors in data processing. Errors entered by the data entry operators can be controlled by input design. The user-originated inputs are converted to a computer-based format in the input design. Input data are collected and organized into groups of similar data. Once identified, the appropriate input media are selected for processing. All the input data are validated and if any data violates any conditions, the user is warned by a message. If the data satisfies all the conditions, it is transferred to the appropriate tables in the database. In this project the student details are to be entered at the time of registration. A page is designed for this purpose which is user friendly and easy to use. The design is done such that users get appropriate messages when exceptions occur.

3.1.2 OUTPUT DESIGN:

Computer output is the most important and direct source of information to the user. Output design

is a very important phase since the output needs to be in an efficient manner. Efficient and intelligible output design improves the system relationship with the user and helps in decision making. Allowing the user to view the sample screen is important because the user is the ultimate judge of the quality of output. The output module of this system is the selected notifications.

DATABASE DESIGN

3.2 DATABASE

Databases are the storehouses of data used in the software systems. The data is stored in tables inside the database. Several tables are created for the manipulation of the data for the system. Two essential settings for a database are

- Primary key - the field that is unique for all the record occurrences
- Foreign key - the field used to set relation between tables

Normalization is a technique to avoid redundancy in the tables.

3.3 SYSTEM TOOLS

The various system tools that have been used in developing both the front end and the back end of the project are being discussed in this chapter.

3.3.1 FRONT END:

React is a library which is developed by Facebook are utilized to implement the frontend. React (also known as React.js or ReactJS) is a free and open-source front-end JavaScript library for building user interfaces or UI components. It is maintained by Facebook and a community of individual developers and companies. React can be used as a base in the development of single page or mobile applications. However, React is only concerned with state management and rendering that state to the DOM, so creating React applications usually requires the use of additional libraries for routing, as well as certain client-side functionality.

3.3.2 BACKEND:

The back end is implemented using MySQL which is used to design databases.

MySQL:

MySQL is the world's second most widely used open-source relational database management system (RDBMS). The SQL phrase stands for Structured Query Language. An application software called Navicert was used to design the tables in MySQL.

Spring-Boot:

This is used to connect MYSQL and fetch data from database and store the data in database. The Spring Framework is an application framework and inversion of control container for the Java platform. The framework's core features can be used by any Java application, but there are extensions for building web applications on top of the Java EE (Enterprise Edition) platform. Although the framework does not impose any specific programming model, it has become popular in the Java community as an addition to the Enterprise JavaBeans (EJB) model. The Spring Framework is Open-source Framework.

PROJECT DIAGRAMS

The screenshot shows a web-based e-commerce platform. At the top, there is a navigation bar with the logo 'KARTOO', 'Home', 'Category', a search bar, a shopping cart icon with '0' items, 'Create Account', and 'Login'. Below the navigation bar, a banner for 'LAPTOP STORE' features the text 'One stop shop for all your laptop needs' and an image of a person's hands typing on a laptop keyboard. To the right of the banner is a photograph of a laptop, a smartphone, a notebook, and a cup of coffee. A promotional section for 'BRAND WAALI QUALITY BAZAAR WAALI DEAL' features a man and a woman smiling, with a 'Download App Now' button and a 'GET IT ON Google Play' button. Below this, there is a 'Categories' section with five categories: 'BOOKS', 'MOBILES', 'FASHION', 'GROCERY', and 'SPORTS', each with a corresponding image and a 'SHOP NOW' button. At the bottom, there is a 'Top Products' section.

The screenshot shows the 'My Account' section of the AnyKart supplier dashboard. At the top, there's a navigation bar with links for 'Home', 'My Account ▾', 'Hello, Supplier', and 'Logout'. A dropdown menu under 'My Account' includes options like 'Profile', 'Edit Profile', 'Change Password', 'Change Address', 'Add Product', 'Product Details', and 'Logout'. Below the dropdown is a red-bordered button bar containing 'Profile' (green), 'Add Product' (green), 'Product List' (red), and 'Logout' (green). The main content area is currently empty.

The screenshot shows the 'My Account' section of the AnyKart supplier dashboard. On the left, there's a sidebar with links for 'About Us', 'Contact Us', 'Terms & Conditions', 'Privacy Policy', and 'FAQs'. The main content area features a 'Contact Us' section with WhatsApp contact information and a 'Download App' section with Google Play and App Store links. At the bottom, a copyright notice reads '© By Rohit and Sagar 2022, AnyKart CDAC Project, INDIA'. A prominent modal window in the center displays a green checkmark icon and the text 'Profile Update successfully' with an 'OKAY' button.

KANYARTOO

© By Rohit and Sagar 2022, AnyKart CDAC Project, INDIA

The screenshot shows a web application interface. At the top left is a logo for "KANYARTOO". The top navigation bar includes links for "Home" and "My Account". On the right side of the top bar, it says "Hello, Supplier". A central modal window titled "Update Product" contains fields for Product Name (Atomic Habits), Product Description (Atomic Habits), MRP (799), Discount % (51), Quantity (19), and Grams (50). Below the form are two buttons: "Home Page" and "Update Product". Above the modal, a message box displays the text "localhost:3000 says Product Updates successfully" with an "OK" button.

The screenshot shows a blurred background image of a laptop store interior. Overlaid on the center is a white modal window containing a green checkmark icon. The text inside the modal reads "Login As cust1@gmail.com Successfully" and has a blue "OKAY" button at the bottom. The top left of the page has a sidebar with links for "About Us", "Contact Us", "Terms & Conditions", "Privacy Policy", and "FAQs". The top right features a "Contact Us" section with the text "WhatsApp us : 8668259342 & 9673830095" and a "Download App" section with links for Google Play and App Store.

The screenshot shows a laptop store website with a dark header bar. The header includes the logo 'KANYA KART', 'Home', 'My Account', 'Category', a search bar with a 'Search' button, a notification icon, and 'Hello, Customer' with a 'Logout' link.

The main section features a large banner with the heading 'LAPTOP STORE' and the subtext 'One stop shop for all your laptop needs'. To the right of the text is a photograph of a person's hands typing on a laptop keyboard, surrounded by a smartphone, a small potted plant, a notebook, and a cup of coffee.

Below the banner is another section with a yellow background featuring a man and a woman smiling. A red speech bubble graphic contains the text 'BRAND WAALI QUALITY BAZAAR WAALI DEAL'. To the right of this graphic is a 'Download App Now' button with a 'GET IT ON Google Play' link.

A modal window in the foreground displays a green checkmark icon and the text '!!! Items Added to Cart !!!' with an 'OKAY' button.

About Us :

"No Time for shopping? We'll do it", Our Aim is to build largest online shopping portal in the country. Anykart's makes your online shopping experience simpler. No More hassles of sweating it out in crowded markets and long queues. We offer you convenience of shopping everything you need at your doorstep. Be it Electronics, books, clothing, footwear, groceries, at single online store.

For that reason AnyKart considers the welfare of all those people who participate in delivering the product to you. Starting with the manufacturers who stand at the beginning of the value chain, the employees who work for its suppliers and all the way to the AnyKart staff that is responsible for the processing, packaging, storage and logistics of our products.

The underlying base for all this are fair and adequate prices that AnyKart pays and that create adequate value at all levels. Frequent visits to its manufactures and upstream suppliers – including those who are no HAND IN HAND partners – provide AnyKart insights into local conditions and help to establish authentic social contacts.

Terms & Conditions :

Personal Information

AnyKart is the licensed owner of the brand AnyKart and the website AnyKart.in ("The Site"). AnyKart respects your privacy. This Privacy Policy provides succinctly the manner your data is collected and used by AnyKart on the Site. As a visitor to the Site/ Customer you are advised to please read the Privacy Policy carefully. By accessing the services provided by the Site you agree to the collection and use of your data by AnyKart in the manner provided in this Privacy Policy.

Services overview

As part of the registration process on the Site, AnyKart may collect the following personally identifiable information about you: Name including first and last name, alternate email address, mobile phone number and contact details, Postal code, Demographic profile (like your age, gender, occupation, education, address etc.) and information about the pages on the site you visit/access, the links you click on the site, the number of times you access the page and any such browsing information.

Eligibility

Services of the Site would be available to only select geographies in India and abroad. Persons who are "incompetent to contract" within the meaning of the Indian Contract Act, 1872 including un-discharged insolvents etc. are not eligible to use the Site. If you are a minor i.e. under the age of 18 years but at least 13 years of age you may use the Site only under the supervision of a parent or legal guardian who agrees to be bound by these Terms of Use. If your age is below 18 years your parents or legal guardians can transact on behalf of you if they are registered users. You are prohibited from purchasing any material which is for adult consumption and the sale of which to minors is prohibited.

License & Site access

AnyKart grants you a limited sub-license to access and make personal use of this site and not to download (other than page caching) or modify it, or any portion of it, except with express written consent of AnyKart. This license does not include any resale or commercial use of this site or its contents; any collection and use of any product listings, descriptions, or prices; any derivative use of this site or its contents; any downloading or copying of account information for the benefit of another merchant; or any use of data mining, robots, or similar data gathering and extraction tools. This site or any portion of this site may not be reproduced, duplicated, copied, sold, resold, visited, or otherwise exploited for any commercial purpose without express written consent of AnyKart. You may not frame or utilize framing techniques to enclose any trademark, logo, or other proprietary information (including images, text, page layout, or form) of the Site or of AnyKart and its affiliates without express written consent. You may not use any meta tags or any other "hidden text" utilizing the Site's or AnyKart's name or AnyKart's name or trademarks without the express written consent of AnyKart. Any unauthorized use terminates the permission or license granted by AnyKart.

FAQs :

Kindly check the FAQ below if you are not very familiar with the functioning of this website. If your query is of urgent nature and is different from the set of questions then do write to us at customerservice@mygreenmart.in or call us on 8668259342/9673830095 between 10 am & 5 pm on all days including Sunday to get our immediate help.

Registration :

How do I register?

You can register by clicking on the "Sign Up" link at the top right corner of the homepage. Please provide the information in the form that appears. You can review the terms and conditions, provide your payment mode details and submit the registration information.

I missed the delivery of my order today. What should I do?

The courier service delivering your order usually tries to deliver on the next business day in case you miss a delivery. You can check your SMS for more details on when the courier service will try to deliver again.

How can I shop on AnyKart?

You can visit our website www.anykart.in and click on the "Shop Now" button.

How can I track my order?

You can track your order by clicking on the "Track Order" button on the homepage.

How can I cancel my order?

You can cancel your order by clicking on the "Cancel Order" button on the homepage.

How can I change my delivery address?

You can change your delivery address by clicking on the "Change Delivery Address" button on the homepage.

How can I change my payment mode?

You can change your payment mode by clicking on the "Change Payment Mode" button on the homepage.

CONCLUSION

The project entitled **AnyKart** was completed successfully.

The system has been developed with much care and free of errors and at the same time it is efficient and less time consuming. The purpose of this project was to develop a web application and an android application for purchasing items from a shop.

This project helped us in gaining valuable information and practical knowledge on several topics like designing web pages using React.js, usage of responsive templates, designing of android applications, and management of database using MySQL. The entire system is secured. Also, the project helped us understanding about the development phases of a project and software development life cycle. We learned how to test different features of a project.

This project has given us great satisfaction in having designed an application which can be implemented to any nearby shops or branded shops selling various kinds of products by simple modifications.

There is a scope for further development in our project to a great extent. A number of features can be added to this system in future like providing moderator more control over products so that each moderator can maintain their own products. Another feature we wished to implement was providing classes for customers so that different offers can be given to each class. System may keep track of history of purchases of each customer and provide suggestions based on their history. These features could have implemented unless the time did not limit us.
